D Depending on the lighting product the integrated dimmer can be operated via a button or touch sensor.

If you want more than to just control your lighting, there is a very good Smart Home solution available that is based on the ZigBee radio standard. ZigBee is hereby deemed to be the most important standard and provides a wireless communication between a Smart Media device and the existing home technology. For lights marked with this symbol a ZigBee module can be ordered optionally as accessory. With an installed ZigBee module, it is possible to control the lighting by voice control without difficulty. The following are just some of the systems that are supported: Philips Hue, Amazon Alexa, Google Home, Apple HomeKit.

For lights marked with this symbol a dimmer (Casambi module) can be ordered optionally as accessory which permits the light to be dimmed via the normal switch and/or via an App (Casambi) by means of smartphone or tablet.

Depending on the actual installation environment, slight flickering may occur when dimming with the Casambi /Zigbee module in the lowest brightness range. As with the classic flushmounted dimmers, you should in such case increase the brightness manually.

* Lights with switch module can be equipped with a dimmer (Casambi/ZigBee module) and can be dimmed via smartphone or tablet.

Dimming via the normal light switch is not possible.

X¹ Depending on the lighting product the integrated dimmer can be operated via a button or touch sensor.
